

What is Encapsulation?

Crawl spaces are humid and damp as a result of the earth's moisture. Crawl space encapsulation seals off the earth from your crawlspace with a thick, anit-microbial liner. When paired with a dehumidifier the result is a dry, clean space.

Why Encapsulate?

- Improved energy efficiency
- Cleanliness for storage
- Eliminating gaseous penetration
- Controlling humidity
- Mold control
- Odor control
- **Improved air quality**
